EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with James Walton (Reg. No. 47,245) on January 6, 2006.

3. **The application has been amended as follows:**

i. **Replace claim 1 as follows:**

A method for handling jobs within a computer system, comprising:

in response to a request for a job to be performed, generating a work item representing the job to be performed, the work item comprising a category, a state, a change history, and a description of the job represented by the work item, the job comprising a customer-generated request;

placing the work item into a particular queue in a plurality of queues based at least in part on the category of the work item, each queue in the plurality of queues being for storing work items representing jobs to be performed;

in turn, opening the work item in the particular queue in response to a request from a business process, and executing one or more tasks on the work item, each task

being for resolving at least a portion of the job represented by the work item by resolving at least a portion of the customer-generated request, wherein executing a task comprises moving the work item to a queue different from its present queue; and

after executing the one or more tasks on the work item:

modifying the state of the work item in response to execution of the one or more tasks;

updating the change history of the work item in response to execution of the one or more tasks;

if the job represented by the work item is complete, archiving the work item; and

if the job represented by the work item is not yet complete, placing the work item into one of the plurality of queues based at least in part on one or more tasks to be executed on the work item.

ii. Cancel claim 5.

iii. Replace claim 11 as follows:

A system for handling jobs within a computer system, comprising:

one or more memory units operable to store a plurality of queues, each queue in the plurality of queues being for storing one or more work items; and

one or more processing units collectively operable to:

generate, in response to receiving a request for a job to be performed, a work item representing the job to be performed, the work item comprising a category, a state, a change history, and a description of the job represented by the work item;

place the work item into a particular queue in the plurality of queues based at least in part on the category of the work item, each queue in the plurality of queues for storing work items representing jobs to be performed;

in turn, opening the work item in the particular queue in response to a request from a business process, and executing one or more tasks on the work item, each task being for resolving at least a portion of the job represented by the work item, wherein a task comprises moving the work item to a queue different from its present queue; and

after executing the one or more tasks on the work item:

modify the state of the work item in response to execution of the one or more tasks;

update the change history of the work item in response to execution of the one or more tasks;

archive the work item if the job represented by the work item is complete; and

place the work item into one of the plurality of queues based at least in part on one or more tasks to be executed on the work item if the job represented by the work item is not yet complete.

Art Unit: 2195

iv. **Cancel claim 28.**
